# Written GIT 1

- 1) Enumerate function and control of gastrin?
- 2) Enumerate function and control of CCK?
- 3) Enumerate function and control of secretin?
- 4) Mention function and control of GIP?

## MCQ (Formative and Important Q)

|  |          |
|--|----------|
| <p><b>1. High acidity in the duodenum stimulates release of:</b></p> <ul style="list-style-type: none"><li>A) Gastrin</li><li>B) Motilin</li><li>C) Secretin</li><li>D) VIP</li><li>E) CCK</li></ul>   | <b>C</b> |
| <p><b>2. Inhibition of somatostatin would most likely cause:</b></p> <ul style="list-style-type: none"><li>A) Excess gastrin and acid secretion</li><li>B) Reduced insulin release</li><li>C) Reduced VIP secretion</li><li>D) Decreased peristalsis</li><li>E) Increased bile storage</li></ul> | <b>A</b> |
| <p><b>3. Gastric emptying is inhibited by:</b></p> <ul style="list-style-type: none"><li>a) calcitonin</li><li>b) CCK.</li><li>c) Gastrin</li><li>d) motilin</li><li>e) Acetyl choline</li></ul>   | <b>B</b> |

|  |          |
|--|----------|
| <p><b>4. Which hormone is possibly increased in a patient with a tumor increasing gastric H<sup>+</sup> level?</b></p> <p>a) CCK<br/>b) VIP<br/>c) Secretin<br/>d) Moulin<br/>e) GIP</p>   | <b>C</b> |
| <p><b>5. The function of secretin hormone is:</b></p> <p>a) contraction of gallbladder wall<br/>b) regulation of food intake<br/>c) stimulation of gastric emptying<br/>d) stimulation of HCL secretion<br/>e) stimulation of pancreatic secretion.</p>                      | <b>E</b> |
| <p><b>6. Release of gastrin from G cells in Antrum is inhibited by which of the following?</b></p> <p>a. Circulating acetyl choline<br/>b. Blood borne Ca<sup>++</sup><br/>c. Distension of stomach<br/>d. Somatostatin<br/>e. Alkalinity of gastric mucosa</p>              | <b>D</b> |
| <p><b>7. How the duodenum normally protects itself against ulcer formation?</b></p> <p>a) It has thick viscous mucus layer<br/>b) It has thick apical membrane<br/>c) Release of histamine by EC like cells<br/>d) Rich in blood supply<br/>e) S- cells release secretin</p> | <b>E</b> |

|   |          |
|---|----------|
| <p><b>8. Sympathetic stimulation to GIT leads to:</b></p> <ul style="list-style-type: none"> <li>a) Inhibition of all functions and constriction of blood vessels.</li> <li>b) Inhibition of GIT motility and dilation of blood vessels</li> <li>c) Only, inhibition of gastrin secretion</li> <li>d) Stimulation of all GIT secretion</li> <li>e) Stimulation of GIT secretion and inhibition of its motility</li> </ul>   | <b>A</b> |
| <p><b>9. The major cause of gallbladder evacuation is:</b></p> <ul style="list-style-type: none"> <li>a) Sympathetic stimulation</li> <li>b) Overfilling of the gallbladder with bile</li> <li>c) A hormone synthesized by the duodenal mucosa and affects gallbladder wall</li> <li>d) The rate of cholesterol synthesis and excretion by the liver</li> <li>e) A pancreatic hormone that control the sphincter of oddi</li> </ul>                                   | <b>C</b> |
| <p><b>10. Which hormone will be inhibited by Low gastric PH?</b></p> <ul style="list-style-type: none"> <li>a) Cholecystokinin (CCK).</li> <li>b) Gastrin</li> <li>c) Gastric inhibitory polypeptide (GIP)</li> <li>d) Secretin.</li> <li>e) Vasoactive intestinal polypeptide (VIP).</li> </ul>  | <b>B</b> |
| <p><b>11. Which of the following is related to short reflexes that regulate GIT function?</b></p> <ul style="list-style-type: none"> <li>a) All reflex components are located in the wall of the gut.</li> <li>b) They are carried by the sympathetic nerves.</li> <li>c) They are carried only by parasympathetic fibers.</li> <li>d) They cannot regulate GIT functions in absence of extrinsic innervation</li> <li>e) They involve centers in the CNS.</li> </ul> | <b>A</b> |

|  |          |
|--|----------|
| <p><b>12. Which of the following is stimulated by CCK hormone?</b></p> <ul style="list-style-type: none"> <li>a) contraction of gall bladder</li> <li>b) gastric motility</li> <li>c) gastric secretion.</li> <li>d) growth of gastric mucosa</li> <li>e) insulin secretion</li> </ul>                             | <b>A</b> |
| <p><b>13. Cholecystikin:</b></p> <ul style="list-style-type: none"> <li>a) is a glycoprotein hormone.</li> <li>b) is secreted mainly by the stomach.</li> <li>c) stimulates gastric emptying.</li> <li>d) Stimulates relaxation of gall bladder.</li> <li>e) stimulates secretion of pancreatic enzymes</li> </ul> | <b>E</b> |
| <p><b>14. A hormone regulates intestinal motility between meals preparing it for next meal:</b></p> <ul style="list-style-type: none"> <li>a) CCK.</li> <li>b) GIP</li> <li>c) Gastrin.</li> <li>d) Motilin.</li> <li>e) Secretin.</li> </ul>  | <b>D</b> |
| <p><b>15. Inhibition of the myenteric plexus leads to which of the following?</b></p> <ul style="list-style-type: none"> <li>(A) Increased Secretion of Secretin from the duodenum.</li> <li>B) Decreased gut motility.</li> <li>(C) Hyperacidity in the stomach.</li> <li>(D) Diarrhea.</li> </ul>                | <b>B</b> |

|  |          |
|--|----------|
| <p><b>16. The pH of duodenal content is increased by:</b></p> <ul style="list-style-type: none"> <li>a) Gastrin.</li> <li>b) GRP.</li> <li>c) Intrinsic factor.</li> <li>d) Pepsin.</li> <li>e) Secretin</li> </ul>  | <b>E</b> |
| <p><b>17. Patient with gastrin secreting tumor would be likely to have:</b></p> <ul style="list-style-type: none"> <li>a) Decrease HCL secretion</li> <li>b) Duodenal ulceration.</li> <li>c) Increase gastric pH in between meals.</li> <li>d) Low incidence of gastro-esophageal reflux disease.</li> <li>e) Protein malabsorption.</li> </ul> | <b>B</b> |
| <p><b>18. Which of the following substances is secreted in response to oral glucose load?</b></p> <ul style="list-style-type: none"> <li>a) Secretin.</li> <li>b) Gastrin.</li> <li>c) CCK.</li> <li>d) VIP.</li> <li>e) GIP.</li> </ul>   | <b>E</b> |
| <p><b>19. Cholecystikin:</b></p> <ul style="list-style-type: none"> <li>a) Is a glycoprotein.</li> <li>b) Is secreted mainly by the distal ileum.</li> <li>c) Stimulate relaxation of gall bladder.</li> <li>d) Is released into blood and stimulates secretion of pancreatic enzymes.</li> </ul>  | <b>D</b> |

|  |          |
|--|----------|
| <p><b>20. Which of the following is a site of gastrin secretion:</b></p> <p>a) Gastric fundus.<br/> b) Gastric antrum.<br/> c) Rectum.<br/> d) Ilium.<br/> e) Colon.</p>   | <b>B</b> |
| <p><b>21. The Secretin hormone:</b></p> <p>(A) Is secreted by the pancreas.<br/> (B) Is released by the pyloric mucosa.<br/> (C) Contracts the gall bladder wall.<br/> (D) Increases the pancreatic Secretion of water and HCO<sub>3</sub><sup>-</sup>.</p>  | <b>D</b> |
| <p><b>22. The Secretion of gastrin cease (stop):</b></p> <p>(A) When the stomach is distended by meal.<br/> (B) When the PH of the gastric content is decreased below 2.<br/> (C) If the fundic mucosa is anaesthetized.<br/> (D) If the vagi are stimulated.<br/> (E) If histamine is injected.</p> | <b>B</b> |
| <p><b>23. Stimulation of sub-mucosal plexus result in an Increase in which of the following?</b></p> <p>(A) Motility of the gut.<br/> (B) Secretion of the gut.<br/> (C) Sphincter tone.<br/> (D) Stomach PH.</p>  | <b>B</b> |

|  |          |
|--|----------|
| <p><b>24. Secretin:</b></p> <p>(A) <i>Is a GIT hormone Secreted from the pylorus.</i></p> <p>(B) <i>Stimulates a pancreatic Secretion rich in enzymes.</i></p> <p>(C) <i>Acts as powerful cholagogue.</i></p> <p>(D) <i>Is secreted as a result of vagus nerve stimulation.</i></p> <p>(E) <i>Stimulates gastric Secretion.</i></p> <p>(F) <i>Is released as a result of contact of acid chyme to the duodenal mucosa.</i></p>   | <b>F</b> |
| <p><b>25. About the GIT hormones affecting gastric function:</b></p> <p>(A) <i>CCK and Secretin Increase both gastric Secretion and motility.</i></p> <p>(B) <i>Gastrin Secretion is stimulated by the digestive products of fat.</i></p> <p>(C) <i>Gastrin inhibits gastric Secretion and delay gastric emptying.</i></p> <p>(D) <i>GIP and VIP inhibit gastric Secretion.</i></p> <p>(E) <i>Somatstatin is a powerful Stimulator to both gastric Secretion and motility.</i></p> | <b>D</b> |
| <p><b>26. It is known that gastrin:</b></p> <p>(A) <i>It is a large protein molecule, somewhat similar in size to pepsin.</i></p> <p>(B) <i>Is not secreted by empty stomach when peristaltic movements may be quite forceful.</i></p> <p>(C) <i>Reaches the secretory cells of the fundus of the stomach through the blood and not through the lumen.</i></p> <p>(D) <i>Promotes the secretion of pepsin, but not that of HCL.</i></p>  | <b>C</b> |
| <p><b>27. It is known that secretin:</b></p> <p>(A) <i>It is a large protein hormone synthesized by the pancreas together with pancreaticozym.</i></p> <p>(B) <i>Is a small polypeptide synthesized by the intestinal mucosa.</i></p> <p>(C) <i>Neutralizes directly the acid chyme that passes through the pylorus.</i></p> <p>(D) <i>Has an optimal activity at a PH equal to 8.4.</i></p>   | <b>B</b> |

|  |          |
|--|----------|
| <p><b>28. Concerning the gastrin hormone:</b></p> <p>(A) It is secreted at the pyloric antrum and reaches the fundus through the gastric lumen.</p> <p>(B) It promotes the secretion of pepsin, but not HCL.</p> <p>(C) Its Secretion Stimulated by secretin and GIP.</p> <p>(D) It is structurally similar to CCK.</p> <p>(E) It has +ve feedback relation with gastric acidity.</p>  | <b>D</b> |
| <p><b>29. About Cholecystikin-pancreozym (CCK), all the following are true except:</b></p> <p>(A) It is GIT hormone secreted by the duodenal mucosa in response to presence of fat or protein digestive products.</p> <p>(B) It causes contraction of the gall bladder wall being a natural cholagogue.</p> <p>(C) It produces a pancreatic Secretion rich in enzymes.</p> <p>(D) It potentiates the action of secretion on the pancreas.</p> <p>(E) It inhibits both gastric and intestinal motility.</p> | <b>E</b> |
| <p><b>30. The enteric nervous system that regulate GIT functions:</b></p> <p>a) Few fibers go to the mouth and the thorax.</p> <p>b) It passes through the pelvic nerve</p> <p>c) It is responsible only for long reflexes.</p> <p>d) It arises mainly from vagus nerve.</p> <p>e) It is located in ganglia in myenteric and submucosal nerve plexuses.</p>  | <b>E</b> |
| <p><b>31. The intrinsic innervation regulating GIT functions is</b></p> <p>a) Located in parasympathetic neurons.</p> <p>b) Its stimulation inhibits all GIT functions.</p> <p>c) It is responsible for long and short reflexes.</p> <p>d) It can direct all functions of the GIT in absence of extrinsic innervation.</p> <p>e) Its activities are modulated by parasympathetic neurons only.</p>   | <b>D</b> |

|   |                 |
|---|-----------------|
| <p><b>32. The GIT hormone is characterized by all the following except:</b></p> <p>(A) They are secreted by APUD system and are divided into 2 families on the basis of their structural similarity.</p> <p>(B) They are secreted in response to specific physiological Stimuli during digestion.</p> <p>(C) Their effects are abolished by cutting the nervous connections of GIT.</p> <p>(D) They affect areas in GIT that may be far away from the sites of their release.</p> <p>(E) I.V injection of their extracts produce similar effect to those produced by the stimuli that release them.</p> | <p><b>C</b></p> |
| <p><b>33. About extrinsic innervation controlling GIT functions, which is correct:</b></p> <p>a) It inhibits all GIT functions.</p> <p>b) It lies between the longitudinal and circular muscle fibers</p> <p>c) It is responsible for long reflexes.</p> <p>d) It arises only from vagus nerve.</p> <p>e) It is located in the gut wall.</p>  | <p><b>C</b></p> |
| <p><b>34. About long reflexes controlling GIT functions, which is correct:</b></p> <p>a) Are mediated through sympathetic and parasympathetic nerves.</p> <p>b) They lie between the longitudinal and circular muscle fibers</p> <p>c) They are responsible for self-regulation of the gut.</p> <p>d) Have no centers in the CNS.</p> <p>e) All components of the reflex are located in the gut wall.</p>   | <p><b>A</b></p> |
| <p><b>35. The short reflexes that regulate GIT functions are mediated through:</b></p> <p>a) Centers in the CNS.</p> <p>b) enteric nervous system</p> <p>c) Extrinsic autonomic nerves.</p> <p>d) Parasympathetic nerves only.</p> <p>e) Sympathetic nerves only.</p>   | <p><b>B</b></p> |

|  |                 |
|--|-----------------|
| <p><b>36. About the long reflexes that regulate the GIT functions:</b></p> <p>a) All reflexes' components are located in the gut's wall</p> <p>b) They are responsible for self-regulation of GI functions.</p> <p>c) They involve centers inside the CNS.</p> <p>d) They occur entirely inside ENS.</p> <p>e) They occur only inside the submucosal nerve plexus.</p> | <p><b>C</b></p> |
| <p><b>37. Which of the following hormones can be found in tissue homogenates from antral and duodenal mucosa:</b></p> <p>a) CCK.</p> <p>b) GIP.</p> <p>c) Gastrin.</p> <p>d) Motilin.</p> <p>e) Secretin.</p>  | <p><b>C</b></p> |
| <p><b>38. Which of the following hormones is released by fat and protein in small intestine and decreases gastric emptying:</b></p> <p>a) CCK.</p> <p>b) GIP.</p> <p>c) Gastrin.</p> <p>d) Motilin.</p> <p>e) Secretin.</p>  | <p><b>A</b></p> |
| <p><b>39. The presence of fat, carbohydrate or protein in the duodenum stimulates the release of which of the following hormones from the duodenal mucosa?</b></p> <p>a-cholecystokinin (CCK).</p> <p>b- glucose-dependent insulinotropic peptide (GLIP).</p> <p>c- gastrin.</p> <p>d- motilin.</p>  | <p><b>B</b></p> |
